GlobalMart · Data Quality Audit Report

Source: UC1 AI Data Quality Reporter — Silver harmonisation pipeline

Audience: Finance team and external auditors

Refresh: Automatically updated on each pipeline run

How to use: Select one or more values in the Entity and Severity filters below. Every chart and table on this page updates instantly.

CRITICAL — Records blocked from analytics. Must be resolved or formally noted before audit sign-off.

HIGH — Significant data quality issues requiring finance review.

MEDIUM — Informational flags that do not block the audit but indicate upstream data problems.

Filter by entity *All*

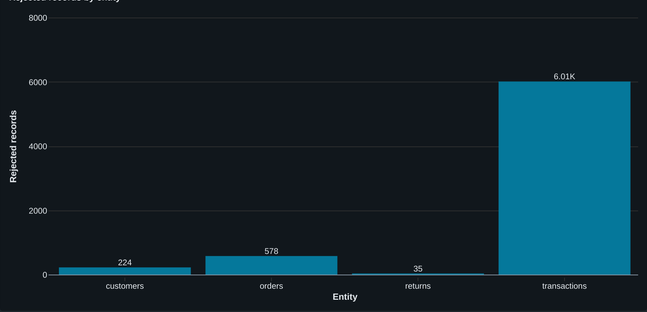
Filter by severity *All*

Entities audited	Total records rejected	Distinct issue types	Critical rejections	High severity rejections	Last pipeline run
4	6.85K	4	6.72K	130	2026-03-27T17:05:35.997502

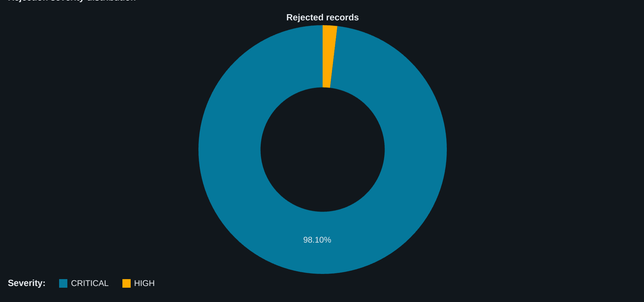
Where are the rejections coming from?

The charts below show which entities carry the most rejection volume and what types of issues are driving them. Click any bar segment to cross-filter across all charts on this page.

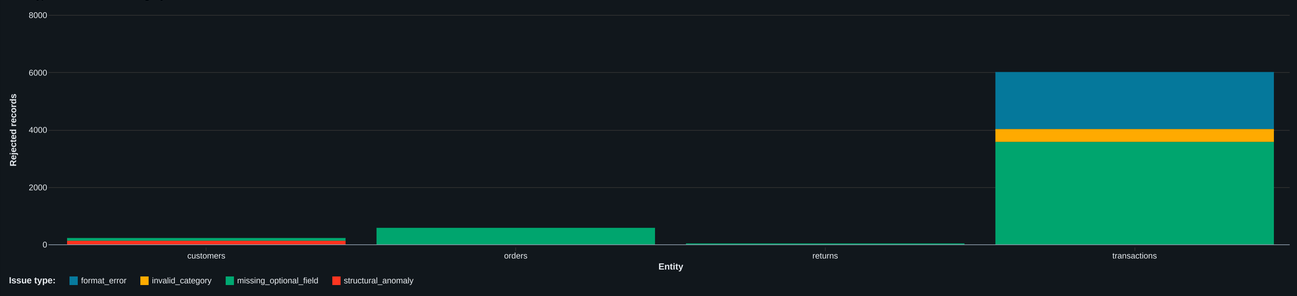
Rejected records by entity



Rejection severity distribution



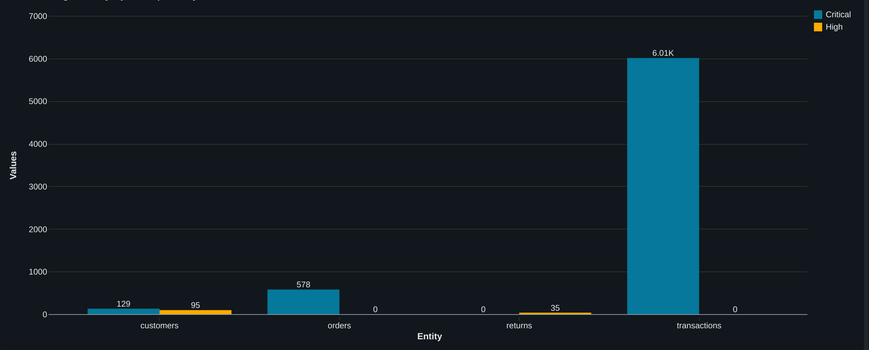
What types of issues are causing rejections?



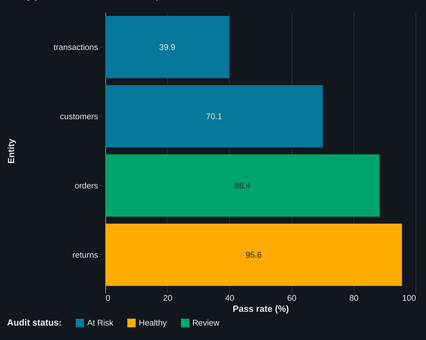
How severe is the risk per entity?

The charts below cut the rejection data from two additional angles — which entities have the most audit-blocking issues, and what percentage of each entity's records actually passed quality checks. An entity with a low pass rate and high CRITICAL count is the first place the finance team should look.

Critical vs High severity rejections per entity



Entity pass rate — audit health snapshot



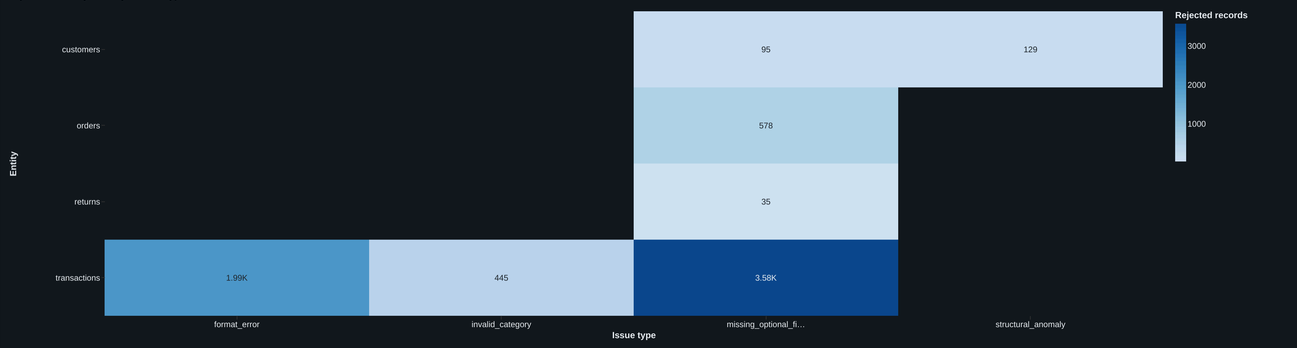
Top 10 highest-volume rejection combinations

The table below ranks every entity and issue type combination by rejected record count. The top rows are where the most data quality effort should be concentrated. The AI explanation column shows the business impact written in plain English — this is the text the finance team can use directly in the audit submission.

Top 10 highest-volume rejection combinations

Entity	Issue Type	Severity	Rejected Count	Source Files
transactions	missing_optional_field	CRITICAL	3575	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/transactions_3.csv
transactions	format_error	CRITICAL	1991	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/transactions_3.csv | /Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%202/transactions_1.csv
orders	missing_optional_field	CRITICAL	578	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%205/orders_3.csv | /Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%201/orders_1.csv | /Volumes/globalmart/raw/source_files/Globalv
transactions	invalid_category	CRITICAL	445	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%202/transactions_1.csv | /Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/transactions_3.csv | /Volumes/globalmart/raw/source_files/GlobalMa
customers	structural_anomaly	CRITICAL	129	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%203/customers_3.csv | /Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%206/customers_6.csv | /Volumes/globalmart/raw/source_files/
customers	missing_optional_field	HIGH	95	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%205/customers_5.csv | /Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/Region%203/customers_3.csv | /Volumes/globalmart/raw/source_files/
returns	missing_optional_field	HIGH	35	/Volumes/globalmart/raw/source_files/GlobalMart_Retail_Data/returns_2.json

Where is rejection volume concentrated?

The heatmap below shows every entity-and-issue-type combination as a grid. Darker cells carry the highest rejection volume. A dark row means one entity has widespread problems across many issue types. A dark column means one issue type is systemic across the whole platform. Use this to decide where to focus the upstream data quality fix first.


Rejection intensity — entity vs issue type
