GlobalMart · Executive Business Intelligence

Source: UC4 Executive Business Intelligence notebook — Gold layer aggregations

Domains: Revenue performance by region | Vendor return rates | Slow-moving inventory

How to read: Each section shows KPI tiles → a chart → a detail table → the AI synthesis. The AI explains root causes, not numbers. Executives already see figures — this tells them what to do.

Refresh: Re-run `UC4_Executive_Business_Intelligence` to update all KPIs and regenerate AI summaries.

Section 1 — Revenue Performance by Region

Latest-month revenue across all regions. Regions are normalised (W→West, S→South). The AI synthesis below explains momentum gaps and identifies whether underperformance reflects demand, coverage, or an operational problem — not just which region was highest.

Primary KPIs:

These counters provide a snapshot of current fiscal health. The gap between Total Revenue and Total Profit indicates our operational overhead, while Total Orders serves as the primary indicator of market demand and sales coverage across all normalized regions.

Total Revenue ($)
Sum of all regional revenue for the latest month

99.48K

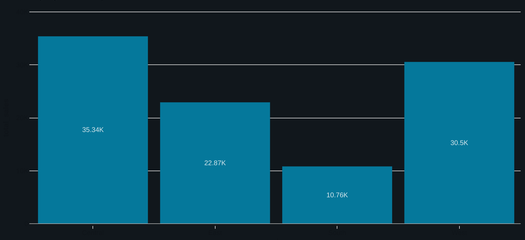
Total Profit ($)
Sum of all regional profit for latest month

4.3K

Total Orders
Total order count across all regions

253

Revenue by region — latest period



Revenue by region — detail

Region	Total Sales ($)	Total Profit ($)	Order Count
Central	35.34K	-1.97K	60
West	30.50K	2.38K	89
East	22.87K	2.47K	67
South	10.76K	1.42K	37

AI Executive Synthesis — Revenue Performance

Generated by the UC4 notebook from aggregated KPIs. The model explains root causes, momentum signals, and a specific recommended action. It was not asked to restate figures.

AI executive synthesis — Revenue Performance

#	AI Executive Summary	Quality	Detail	Generated
1	Overall revenue is EXPECTED, because month-over-month growth across all regions remains positive and aligns …	PASS	none	2026-03-27

Section 2 — Vendor Return Rates

Return rates per vendor compared against the 20% industry benchmark. return_rate_pct is expressed as a percentage (18.7 = 18.7%). Vendors above 20% carry active financial risk. The AI synthesis diagnoses root cause per flagged vendor and recommends specific action.

Vendors Analyzed
Total active vendors with return data

4

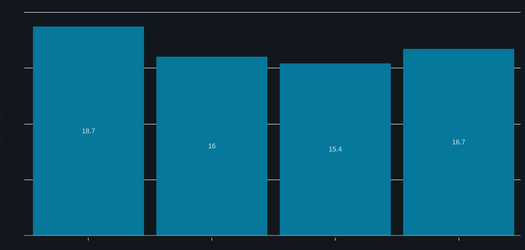
Vendors Above 20% Threshold
Vendors exceeding the industry benchmark — need active management

0

Fleet Avg Return Rate (%)
Average return rate across all vendors. Industry benchmark = 20%.

16.7

Return rate by vendor — coloured by risk level



risk_level: MODERATE

Vendor return rates — detail

Vendor	Return Rate (%)	Total Returns	Total Orders	Total Refunds ($)	Risk Level
Johnsons Logistics	18.70	49	262	13778.84	MODERATE
Voyage Enterprises	16.70	129	775	33420.06	MODERATE
Seaborne Ltd.	16.00	469	2930	112050.39	MODERATE
Velocity Logistics	15.40	153	993	36493.66	MODERATE

AI Executive Synthesis — Vendor Return Rates

The model was asked to diagnose root cause per flagged vendor — product quality, fulfillment defect, or category mismatch — and recommend specific action: renegotiate, probation, or alternative sourcing.

AI executive synthesis — Vendor Return Rates

AI Executive Summary	Quality	Detail	Generated
The vendor return picture is within norms because every active supplier's return rate stays below the 20 % industry…	PASS	none	2026-03-27

Section 3 — Slow-Moving Inventory

Products with low sales velocity by region. Exposure = SUM(total_sales) for slow-moving SKUs — this is the revenue value already generated, not unit prices. The actual cost of inaction is higher when holding cost, markdown risk, and opportunity cost of tied-up shelf space are included. The AI explains WHY inventory sits unsold, not just that it exists.

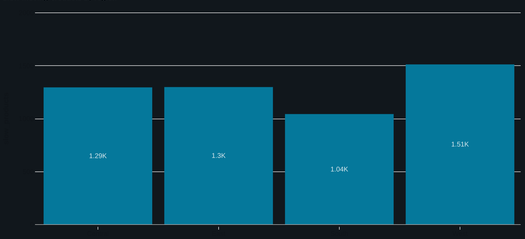
Total Slow-Moving Products
Count of SKUs flagged as slow-moving across all regions

5.14K

Total Exposure ($)
SUM(total_sales) for all slow-moving products. Computed from total_sales column — not quantity. Actual cost of inaction is higher.

2.09M

Slow-moving products by region



Slow-moving inventory by region — detail

Region	Slow Products	Exposure ($)	Avg Days Stagnant
West	1510	698297.82	2925.00
East	1296	556637.72	2945.00
Central	1293	504376.78	2949.00
South	1041	328646.03	2970.00

AI Executive Synthesis — Slow-Moving Inventory

The model explains why inventory sits unsold — pricing misalignment, vendor oversupply, merchandising failure, or demand mismatch — and quantifies the full cost of inaction beyond the headline exposure figure.

AI executive synthesis — Slow-Moving Inventory

AI Executive Summary	Quality	Detail	Generated
The current inventory stagnation is alarming because the volume of slow-moving items is high and the average da…	PASS	none	2026-03-27

Section 4 — Pipeline Health

Last 10 runs of the UC4 notebook. Status = SUCCESS means all 3 LLM summaries passed quality validation. needs_review = 0 means all AI outputs are PASS. If the last run is more than 24 hours ago, re-run the notebook.

UC4 pipeline run log

Run Time	Status	Domains Scored	LLM Calls	Needs Review	Notes
2026-03-27T17:02:28.636884	SUCCESS	3	3	0	domains=revenue,vendor_return_rate,slow_inventory | period=8
